

Rehabilitation Report Card

(October 1, 2008 – September 30, 2009)

The St. Joseph Rehabilitation Center in Eureka, California has been serving the community since 1987. This summary has been prepared in an effort to inform potential patients, families, medical personnel and other interested parties about the types of patients who benefit from rehab, their average length of stay, and how efficiently services are delivered.

Although our patients have many diagnoses and come from all walks of life, a typical patient is 70 years old and is a stroke survivor, or recuperating from a spinal cord injury, orthopedic surgery, or head injury.

Impairment Groups

Average Age

St. Joseph	69
Region	68
Nation	69

Average Length of Stay

St. Joseph:	13
Region:	15
Nation:	15

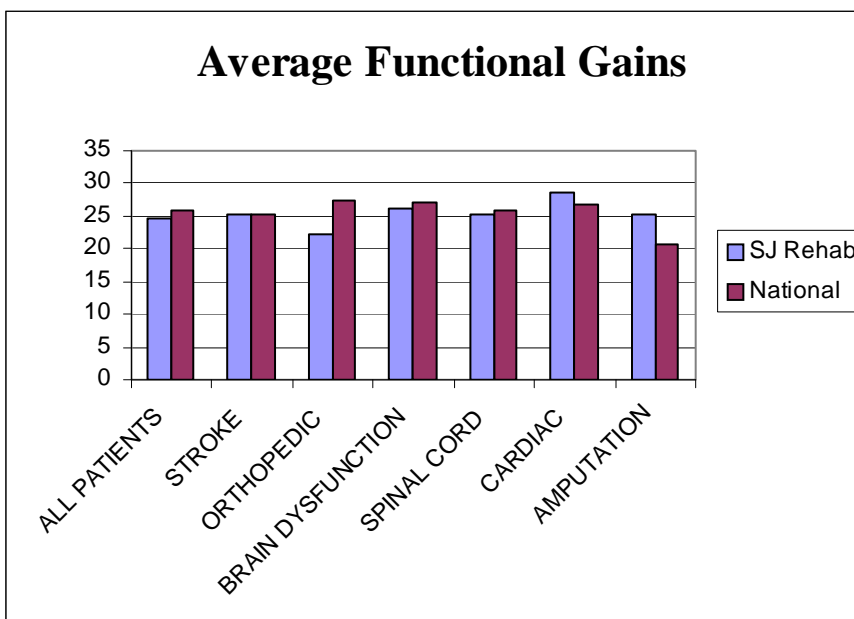

Functional Independent Measure

FIM scores are used to rate the ability of persons to care for themselves. Each patient is rated at admission, weekly while on the unit, at discharge and at follow-up.

The graph at the right compares average gains from admission to discharge of St. Joseph Rehab patients to national averages.

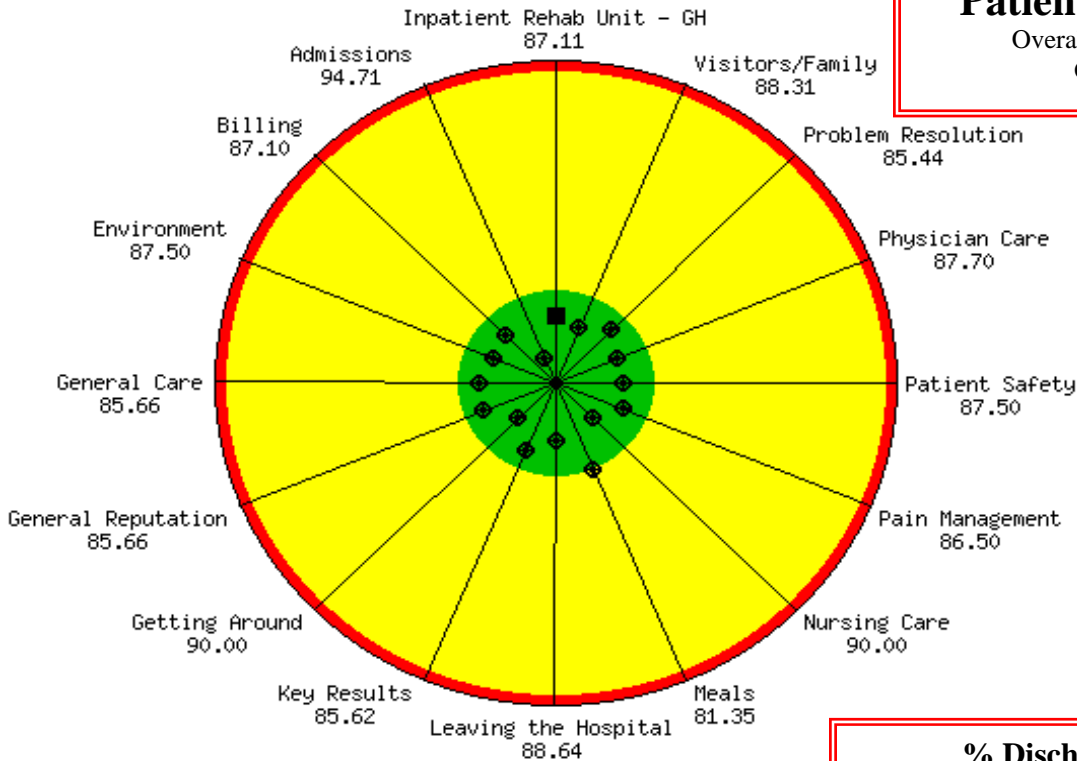

Average Functional Gains

"All the staff were very caring and patient and very supportive of family"

Patient Satisfaction

Overall Average – 87.1
Goal – 90.0

Nation	72 %

*“Thank you
to the nurses,
aides and
therapists
at Rehab
for your
exceptional care
and
encouragement”*

Recipient of 2009 Top Performer Award

St. Joseph Hospital Acute Rehabilitation Unit has been recognized as a 2009 Top Performer by Uniform Data Systems for Medical Rehabilitation. Out of over 800 Acute Rehabilitation Units, St. Joseph ranks in the top 5% in the Nation for patient outcomes. This designation is based on performance on a number of levels, including complexity of disability and diagnosis, length of stay and discharge destination data.

“Everyone I came in contact with was kind, helpful and professional”
